

Connect^{with} Sage **200** Suite

How Sage 200 helps you keep control of your business

Do you need to understand what's going on across the whole of your business? Do your different departments communicate with each other? Do your processes help or hinder your business?

The Sage 200 Suite brings together financial management, customer relationship management and Business Intelligence software so you can share data easily throughout your business.

It's ideal for companies with a turnover of between £1 million - £50 million or typically 20 - 200 employees.

More than 23,000 of the largest UK businesses, including more than one third of the FTSE 100 choose Sage mid-market software to support their businesses.

Connect with your data

- Support decision making by sharing vital financial and commercial information with every area of your business.
- Get the right data to the right people so they see what they need to see, without being distracted by too much information.
- Spot opportunities to increase revenue and reduce costs by giving people access to business data in a format that's easy to understand.
- Control all your bank, investment and cash accounts either from the office or via a mobile device whilst on the move.
- Handle multi-currency processing.

A customer's view

We knew that in order to make our mark on this competitive marketplace we would have to get two things right – our processes and our promotion. A flexible, scalable IT solution was needed to underpin both, so we chose Sage 200.

Steven Mackintosh Managing Director, Mantinga UK Limited

A few words about Business Intelligence

The Sage 200 Suite includes Business Intelligence. Quite simply, it means you can view your business data from across different departments and divisions in the format that suits you. It shapes that data into meaningful information so you can use it to make informed strategic and business critical decisions.

- Capture details of your financial status and use that to make intelligent decisions.
- Analyse your data the way you want to – by product, sales region or line of business.
- Bring business data to life by adding charts, graphs and visuals to reports and presentations.

Connect with customers

- Draw data from different areas of your business including finance, orders and purchase history to plan and target effective marketing.
- Track sales and profitability with marketing analysis tools.
- Improve service and encourage sales by using customer data intelligently.
- Make the best use of your marketing budget by connecting to the right customers at the right time.
- Give teams based out of the office access to financial and customer data via mobile devices including BlackBerry and iPhone.

Connect your business your way

- Get a better insight into your business with reports and analysis ready to go.
- Quickly and easily build or amend standard reports to reflect the information that's important to your business.
- Make it easy for everyone to get the information they need, whether they're in sales, finance or other areas of your business with customised work spaces.
- Simplify administration around timesheets and expenses by using simple web forms to process and approve payments online.

Connect with support tailored to your needs

Our network of more than 160 Business Partners offer advice and support on everything from getting you set up through to training and on-going software development.

We work with over 900 Sage Developers who can tailor your software specifically for your business and adapt it to work in line with third-party systems.

Additional modules for:

- in-depth project accounting
- commercials
- construction
- manufacturing
- bill of materials
- wholesale and retail
